Application Lifecycle Management

Rodrigo Martins Pagliares

Application Lifecycle Management

Rodrigo Martins Pagliares

Last update: 01/05/2024

Agenda

1. **Downloading/Cloning** the HostelApp
2. **Opening** the **HostelApp** in **IntelliJ** Ultimate Edition
3. The **backend module** of HostelApp
4. The **frontend module** of HostelApp
5. **Running** the **backend module** of HostelApp
6. **Running** the **frontend module** of HostelApp
7. **Services view** in **IntelliJ**
8. Online **Demo**
9. What's **next**?

Downloading/Cloning the HostelApp

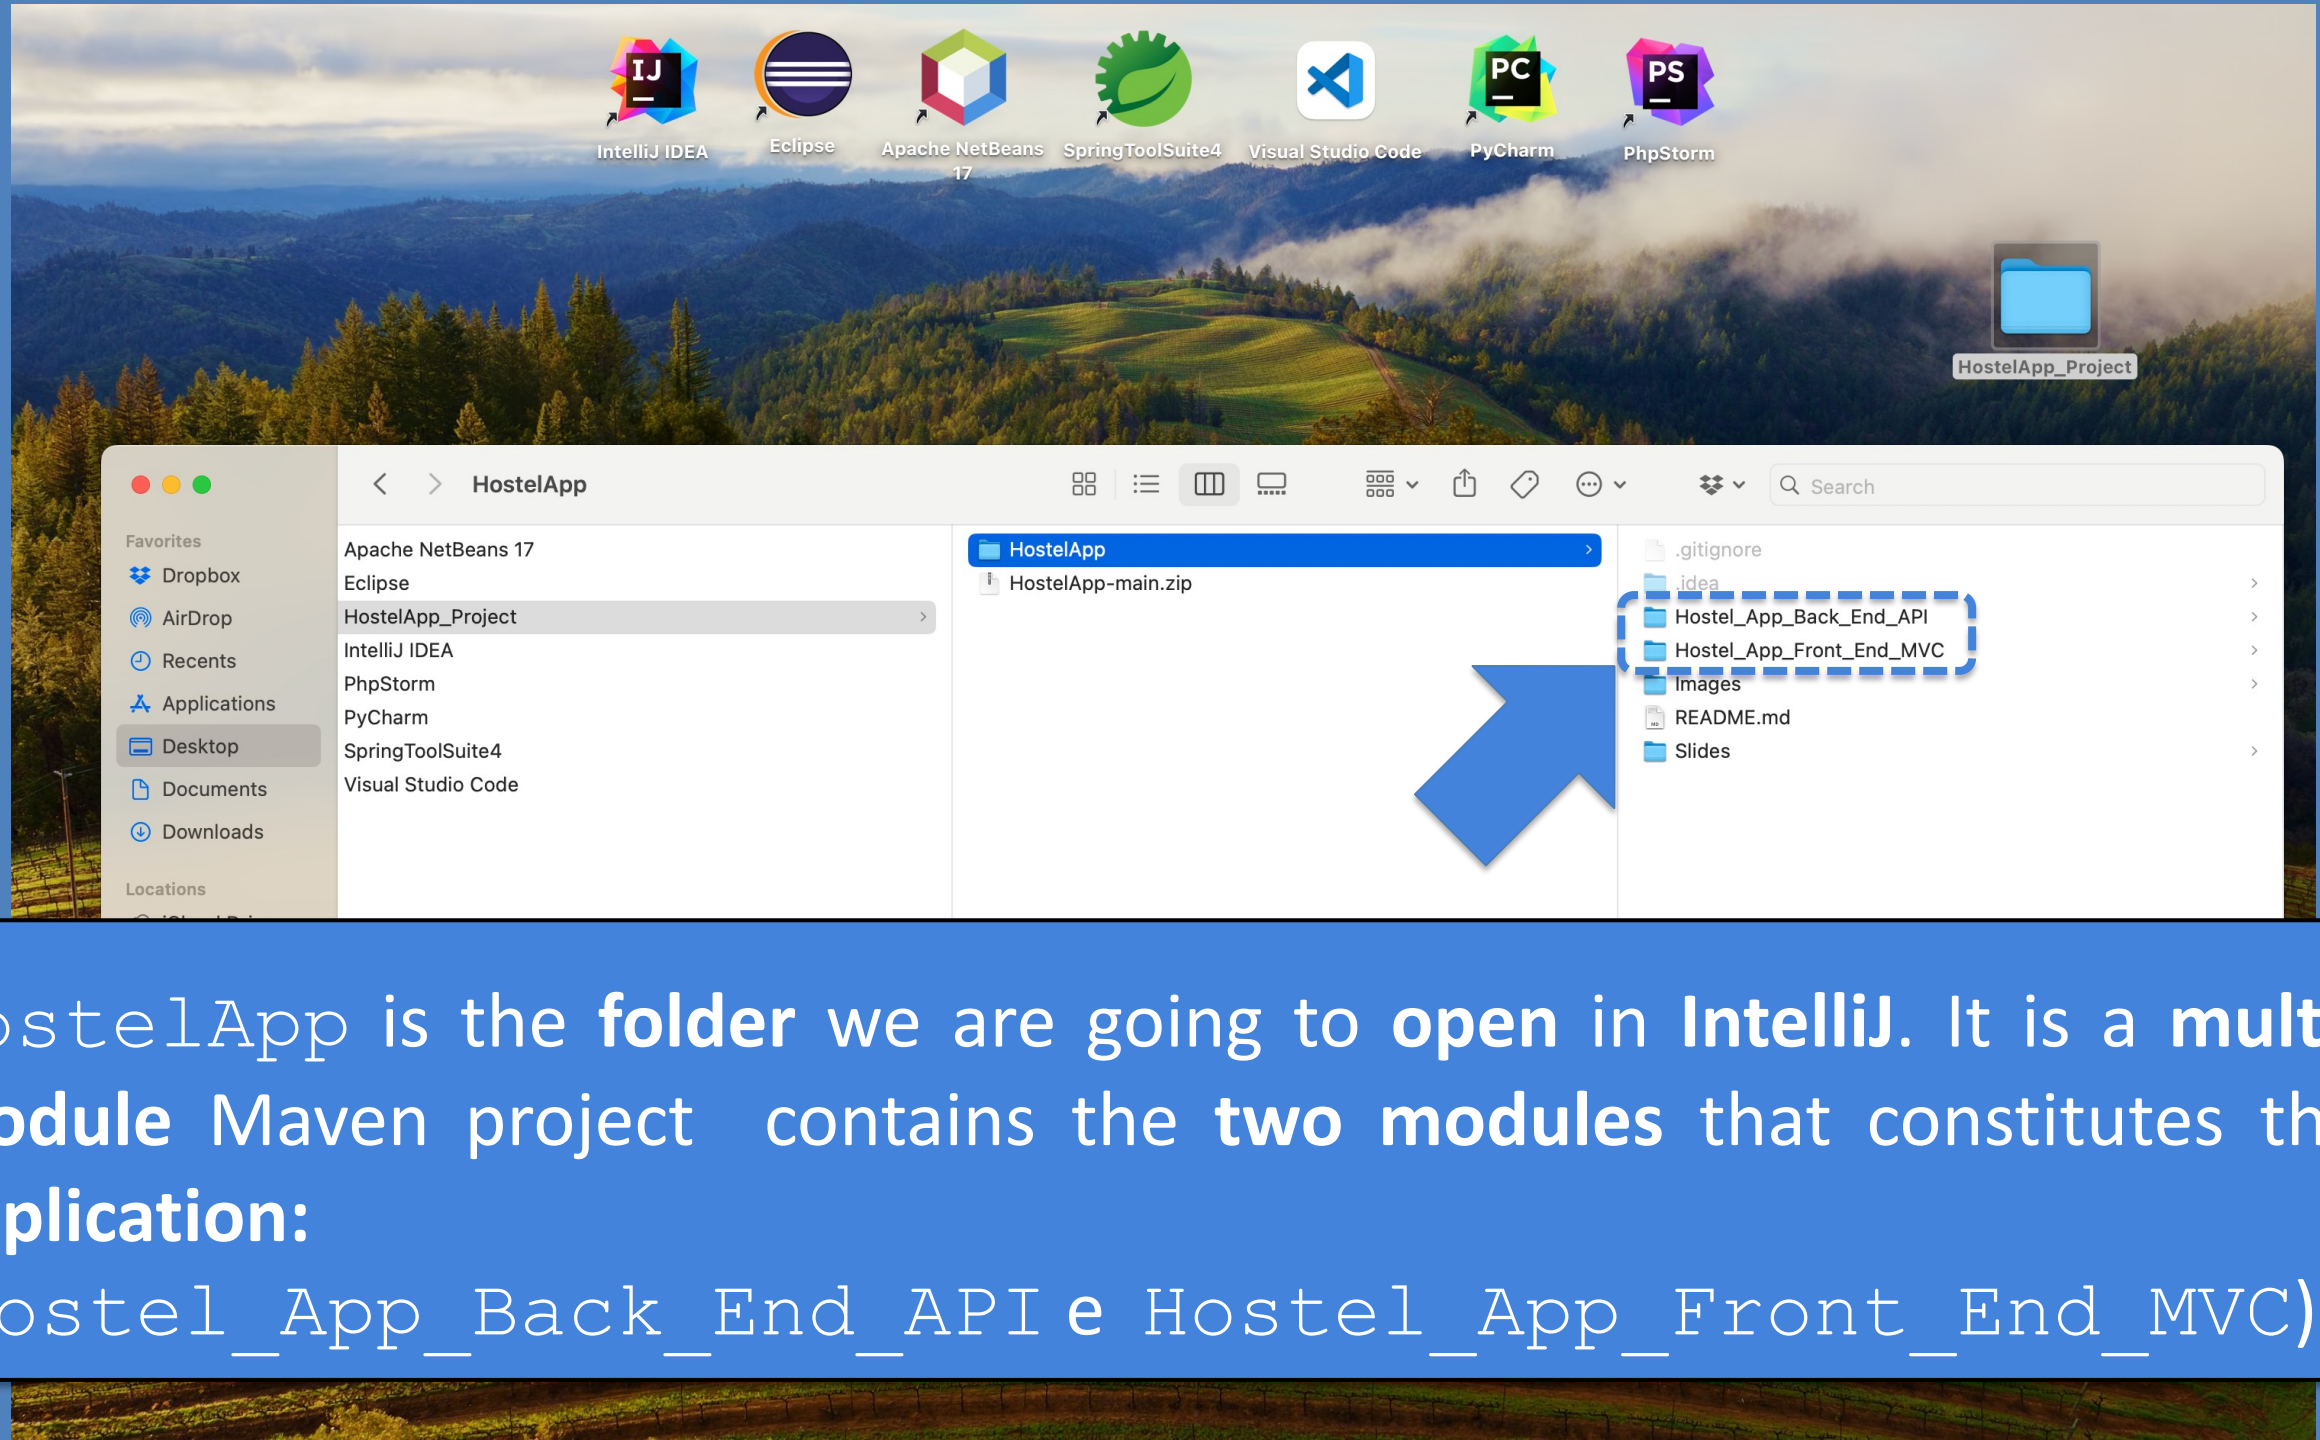
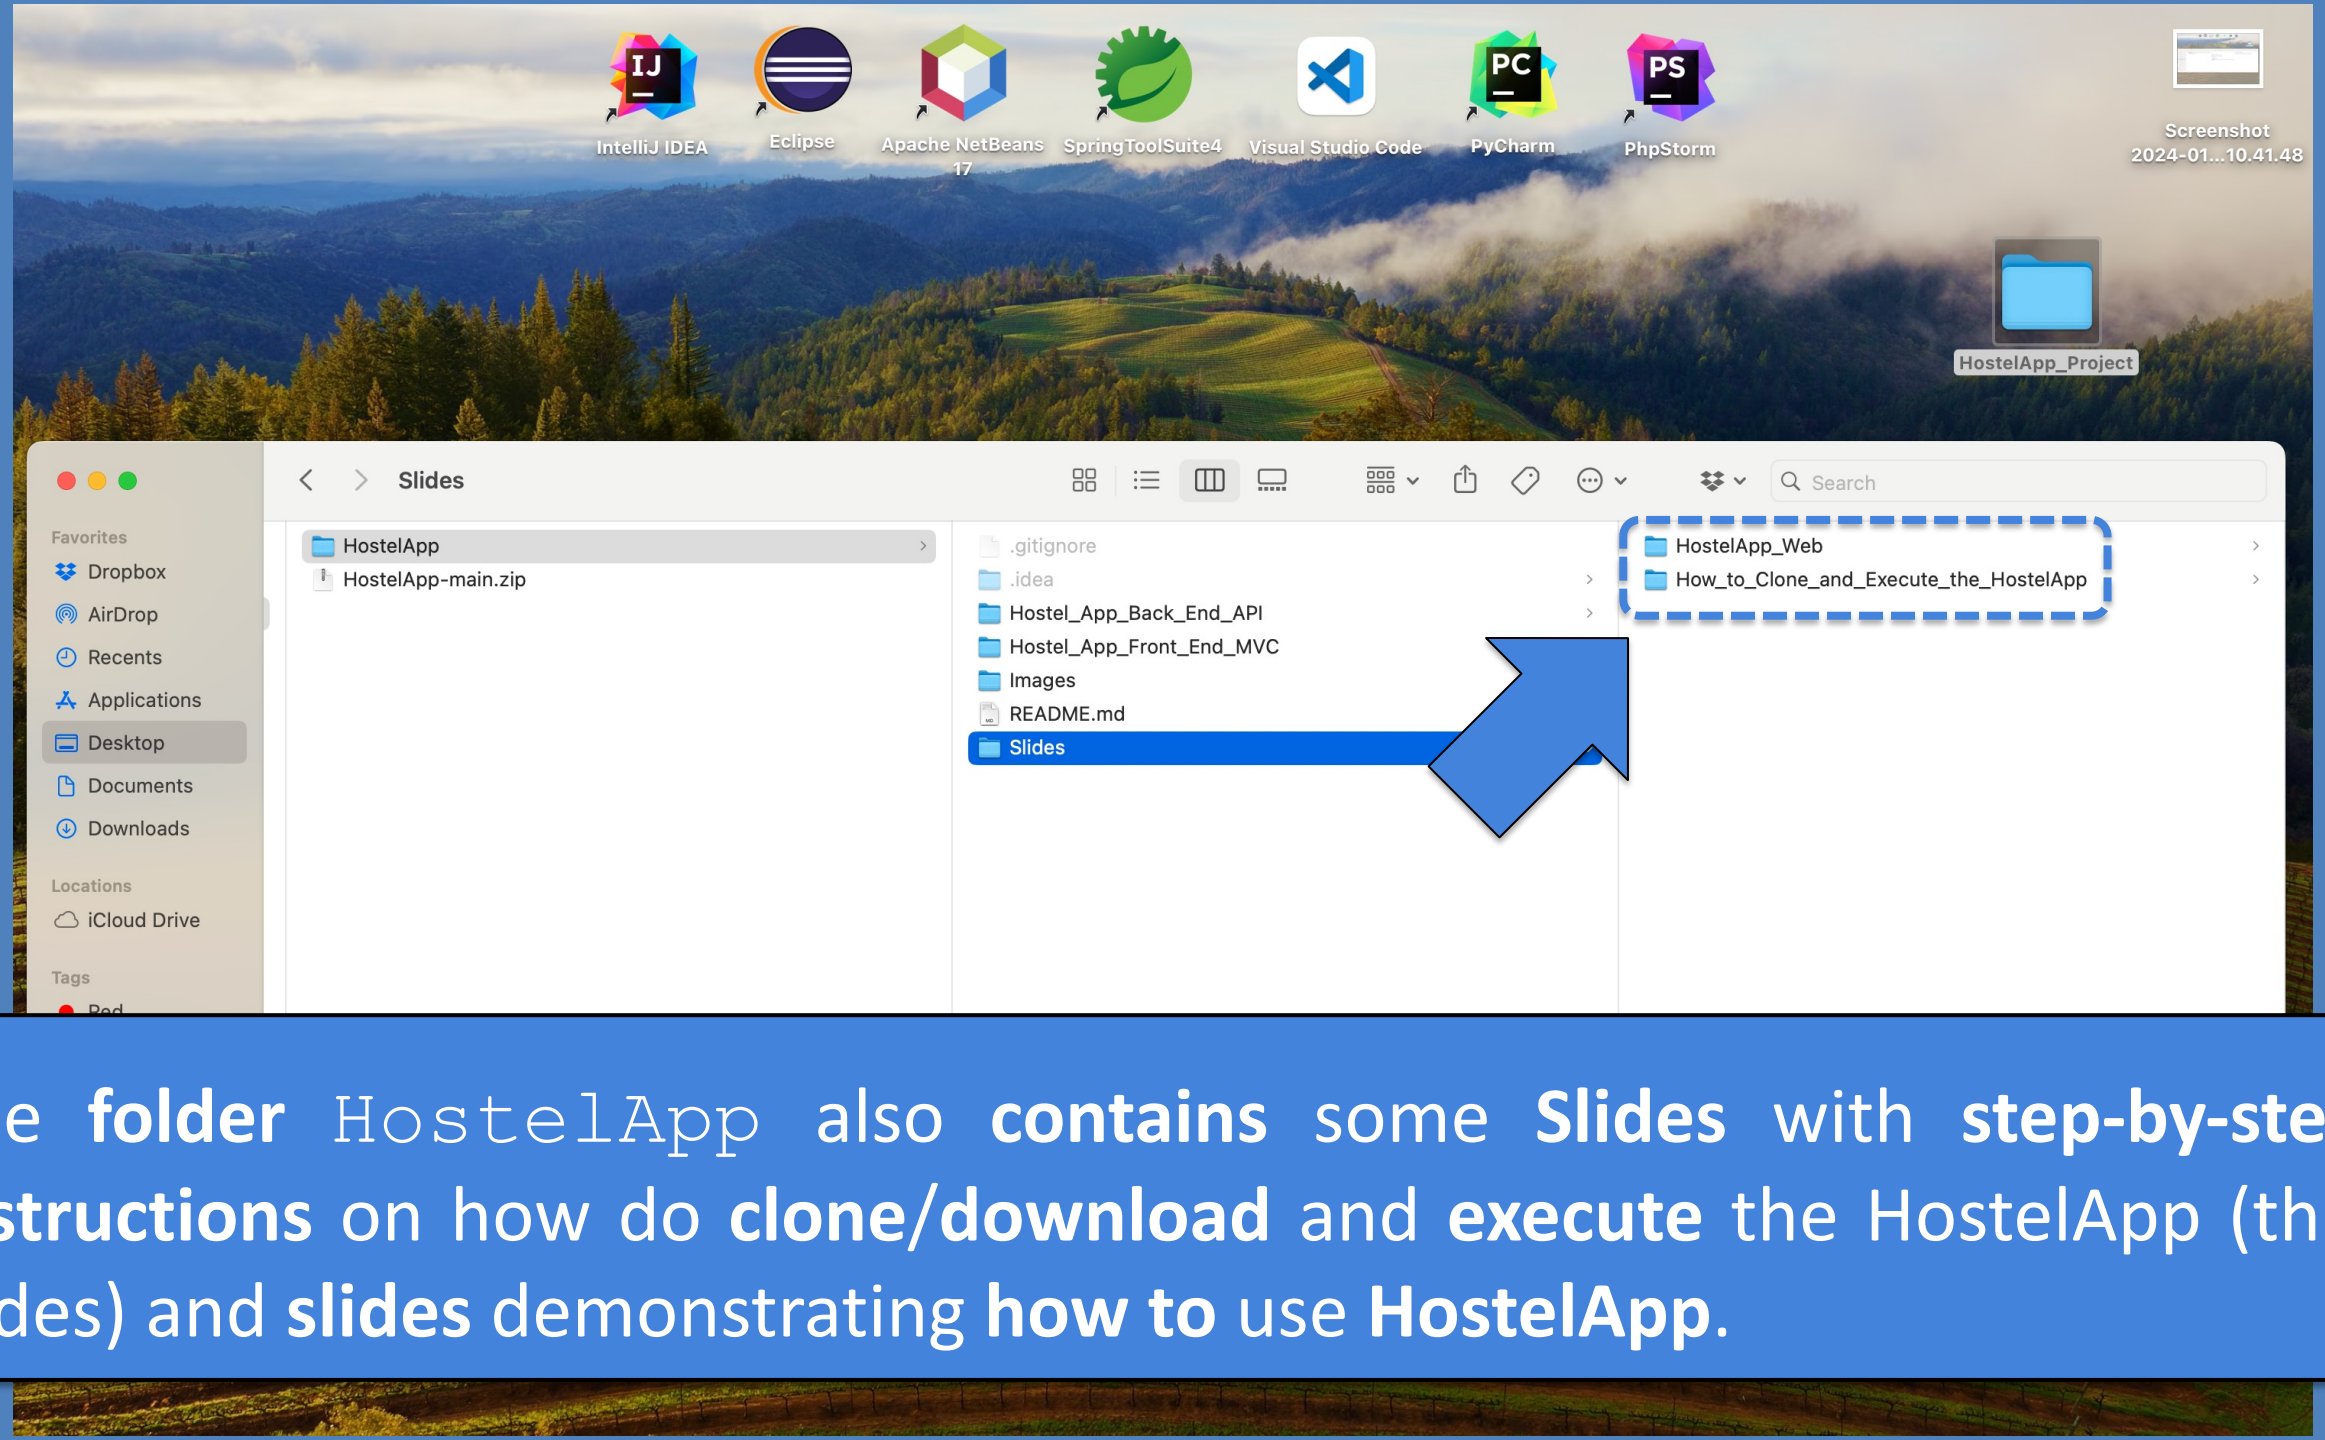
"`-main`" is a **suffix** that **indicates** this **project** was **downloaded** from a **`main`** **branch** in **GitHub**. We can **rename** the **directory name**, **removing** the **suffix.**



`HostelApp` is the **folder** we are going to **open** in **IntelliJ**. It is a **multi-module** Maven project contains the **two modules** that constitutes the **application:**
(`Hostel_App_Back_End_API` **e** `Hostel_App_Front_End_MVC`)



The **folder** `HostelApp` also **contains** some **Slides** with **step-by-step instructions** on how do **clone/download** and **execute** the HostelApp (this slides) and **slides** demonstrating **how to** use **HostelApp**.
